## Slurry Solidify - Super Absorbent Waste Water Solidification & Stabilizer

Transforms Toxic Waste Waters & Heavy Sludge into Safe & Legal Landfill Solid ~ *Within Minutes . . .*  
 For Immediate Disposal & Classification as Construction Debris - with Certification Papers.

Fact: Landfills refuse anything that contains free-liquids because of the basic problem that liquids have on their collection system, which gathers enough fluids from rainwater and the decomposing of waste. The only practical alternative to dumping liquid is to turn the slurry into a solid waste, which is easy to do, economical, safe, and landfill accepted.

### Fast, Easy, Effective - Waste Water Solidification

"Lose Not One Drop of Slurry" - Super Absorbent with *Lock-In* Features:

- ! Non-Biodegradable - Will not release absorbed liquid even when evaporation occurs
- ! Reduces Waste Disposal Costs - **Expands in volume and weight by less and 1%**

! **Encapsulates and stabilizes many types of hazardous waste including metals and radioactive waste**  
 ! Passes the RCRA and TCLP Tests: **Resource Conservation and Recovery Act (RCRA) - Hazardous Waste "Cradle-To-Grave" System.** Authority of the U.S. Environmental Protection Agency (EPA) to track hazardous waste from the time it's created until it's recycled, treated or disposed. The Toxic Characteristic Leaching Procedure (TCLP) determines the toxic leaching of waste material. On-going studies confirm the migration of hazardous waste in significant concentrations to leach beds, underground water sources and at non-hazardous waste landfill sites to off-site drinking water sources located over a mile away - in concentrations exceeding Federal drinking water standards.

- ! The Slurry *Solidified* Waste is approved for incineration & passes the Paint Filter Test (EPA 9095):
  - Solidifies all types of free liquids > Will Not Release the free liquid or its encapsulated debris
  - Landfill Approved for Safe Disposal and accepted for disposal in standard construction site dumpsters
  - Freeze-Thaw Tested: Slurry *Solidified* Waste will maintain its absorption > will not release free liquids or debris

! Encapsulates / stabilizes metals and aqueous waste (liquid wastewater almost entirely water-based) containing settled or suspended debris such as oil-water mixes, silica, PCB, lead paint flakes, rust particles, *Super 8* RCRA Metals, low level radioactive waste (LLRW), etc.

<p><b>Slurry Solidify - Super Absorbent Wastewater Solidification.</b></p> <p>Highly Concentrated Non-Toxic Super Absorbent Polymer - Use sparingly:          Under some conditions one pound can completely solidify 10 or more gallons of water!  <b>DIRECTIONS:</b> Add 1 to 2 oz per gal of rinse waste, 1/2 oz per gal of sludge, 1 lb per 32 gal of concrete slurry.</p>	<p><b>\$ 90.00</b></p> <p>2 Gallon Pail  <i>Solidifies</i> 320          Gallons of          Slurry</p>	<p><b>\$ 180.00</b></p> <p>50 lb Bag  <i>Solidifies</i> 1600          Gallons of          Slurry</p>
